

Zomato Insights & Trends Report

A Data-Driven Analysis of Restaurant Trends and Customer Insights

Prepared by: Soumya Singhal, Management & Finance Undergraduate from St. Xavier's College, Kolkata.

Tool Used: Microsoft Excel (Pivot Tables, Charts, Dashboard)

Date: 5th March, 2026.

Overview

This report presents key insights from Zomato's restaurant dataset, exploring restaurant distribution, customer preferences, cost trends, and online delivery patterns.

Using Excel pivot tables and dashboards, this project analyzes how Zomato connects users and restaurants across cities, cuisines, and services — uncovering patterns that reflect customer behavior and restaurant performance.

Key Insights

Restaurant Presence ?

Analyze the number of restaurants by city and country to understand Zomato's market coverage and global presence.

Insights:

- Zomato has the highest number of restaurants in metro cities such as **New Delhi, Mumbai, and Bangalore**, showing a strong urban presence.
- Smaller cities have fewer listings, which indicates potential for future market expansion.
- The average cost for two is generally higher in metro areas, reflecting premium dining and cost-of-living differences.
- The data highlights that Zomato's major activity is concentrated in large cities, where food delivery demand is high.

Cuisine Trends 華

Visualize the most popular cuisines and their availability across different cities. Identify customer food preferences and the top 10 most listed cuisines.

Insights:

- The most popular cuisines across Zomato restaurants are **North Indian, Chinese, and Italian** — showing a mix of local and global tastes.
- Fast food and continental cuisines also appear frequently, especially in urban and delivery-focused markets.
- Online delivery is most common among restaurants offering North Indian, Chinese, and Fast Food, as these cuisines are quick to prepare and widely preferred for takeout.

Cost & Dining

Show the average cost for two across different cities and countries. Highlight variations in pricing to reveal cost trends and spending patterns.

Insights:

- Only a small percentage of restaurants offer table booking, suggesting that many are quick-service or casual dining formats.
- Restaurants that provide table booking options usually fall in higher price ranges, indicating premium dining experiences.
- The average cost for two varies significantly between cities and restaurant types, showing that affordability and experience level both influence Zomato listings.

Location Analysis

Highlight the localities with a higher concentration of highly rated restaurants. This helps identify premium dining zones or food clusters within major cities.

Insights:

- Localities like Connaught Place (Delhi), Bandra (Mumbai), and Koramangala (Bangalore) have a high concentration of top-rated restaurants.
- These areas are food hotspots with strong customer activity, suggesting better exposure and market growth.
- Certain smaller localities show fewer but highly rated restaurants, indicating niche markets with strong quality standards.

Currency & Price Range

Compare the average cost for two across different currencies and price ranges. This helps understand Zomato's international presence and pricing diversity.

Insights:

- Zomato operates in multiple currencies, but INR, AED, and USD are the most common, highlighting strong presence in India and UAE.
- Higher price ranges correspond to higher average costs, while lower price ranges dominate casual dining and local restaurants.
- This analysis shows how pricing models vary by region, offering a clear view of Zomato's global market reach.

Delivery & Takeaway

Analyze how many restaurants provide online delivery or takeaway services, and how these features impact pricing and customer ratings.

Charts Included:

- Online Delivery Availability
- Takeaway vs Dine-In Comparison

Insights:

- A large percentage of restaurants on Zomato offer online delivery, reflecting growing demand for convenience and speed.
- Restaurants offering both delivery and takeaway often maintain mid-level pricing, appealing to a broader audience.
- The trend confirms that Zomato's platform is primarily driven by online delivery, making it the backbone of its business model.

Summary & Findings

Through this analysis, several key business and customer trends emerge:

- Major metropolitan cities such as Delhi, Mumbai, and Bangalore account for the highest concentration of restaurants, reflecting stronger customer demand and higher food delivery penetration in urban markets.
- North Indian and Chinese cuisines dominate across locations, indicating consistent customer preference toward widely accessible and delivery-friendly food categories.
- Restaurants offering online delivery generally maintain slightly higher customer ratings, suggesting stronger operational consistency and customer engagement.
- Higher price ranges often correlate with better customer satisfaction and premium dining experiences, particularly among restaurants offering table booking services.
- Delivery and takeaway services continue to play a significant role in restaurant visibility and customer reach, highlighting the growing importance of convenience-driven consumption.
- Zomato's presence across multiple cities and countries demonstrates strong market diversity, adaptability, and operational scalability across varying consumer segments.

Overall, the dashboard provides a structured and data-driven understanding of restaurant behavior, customer preferences, pricing patterns, and platform performance, helping identify operational trends and potential growth opportunities within the food delivery ecosystem.
